9. Bugs Report

STR

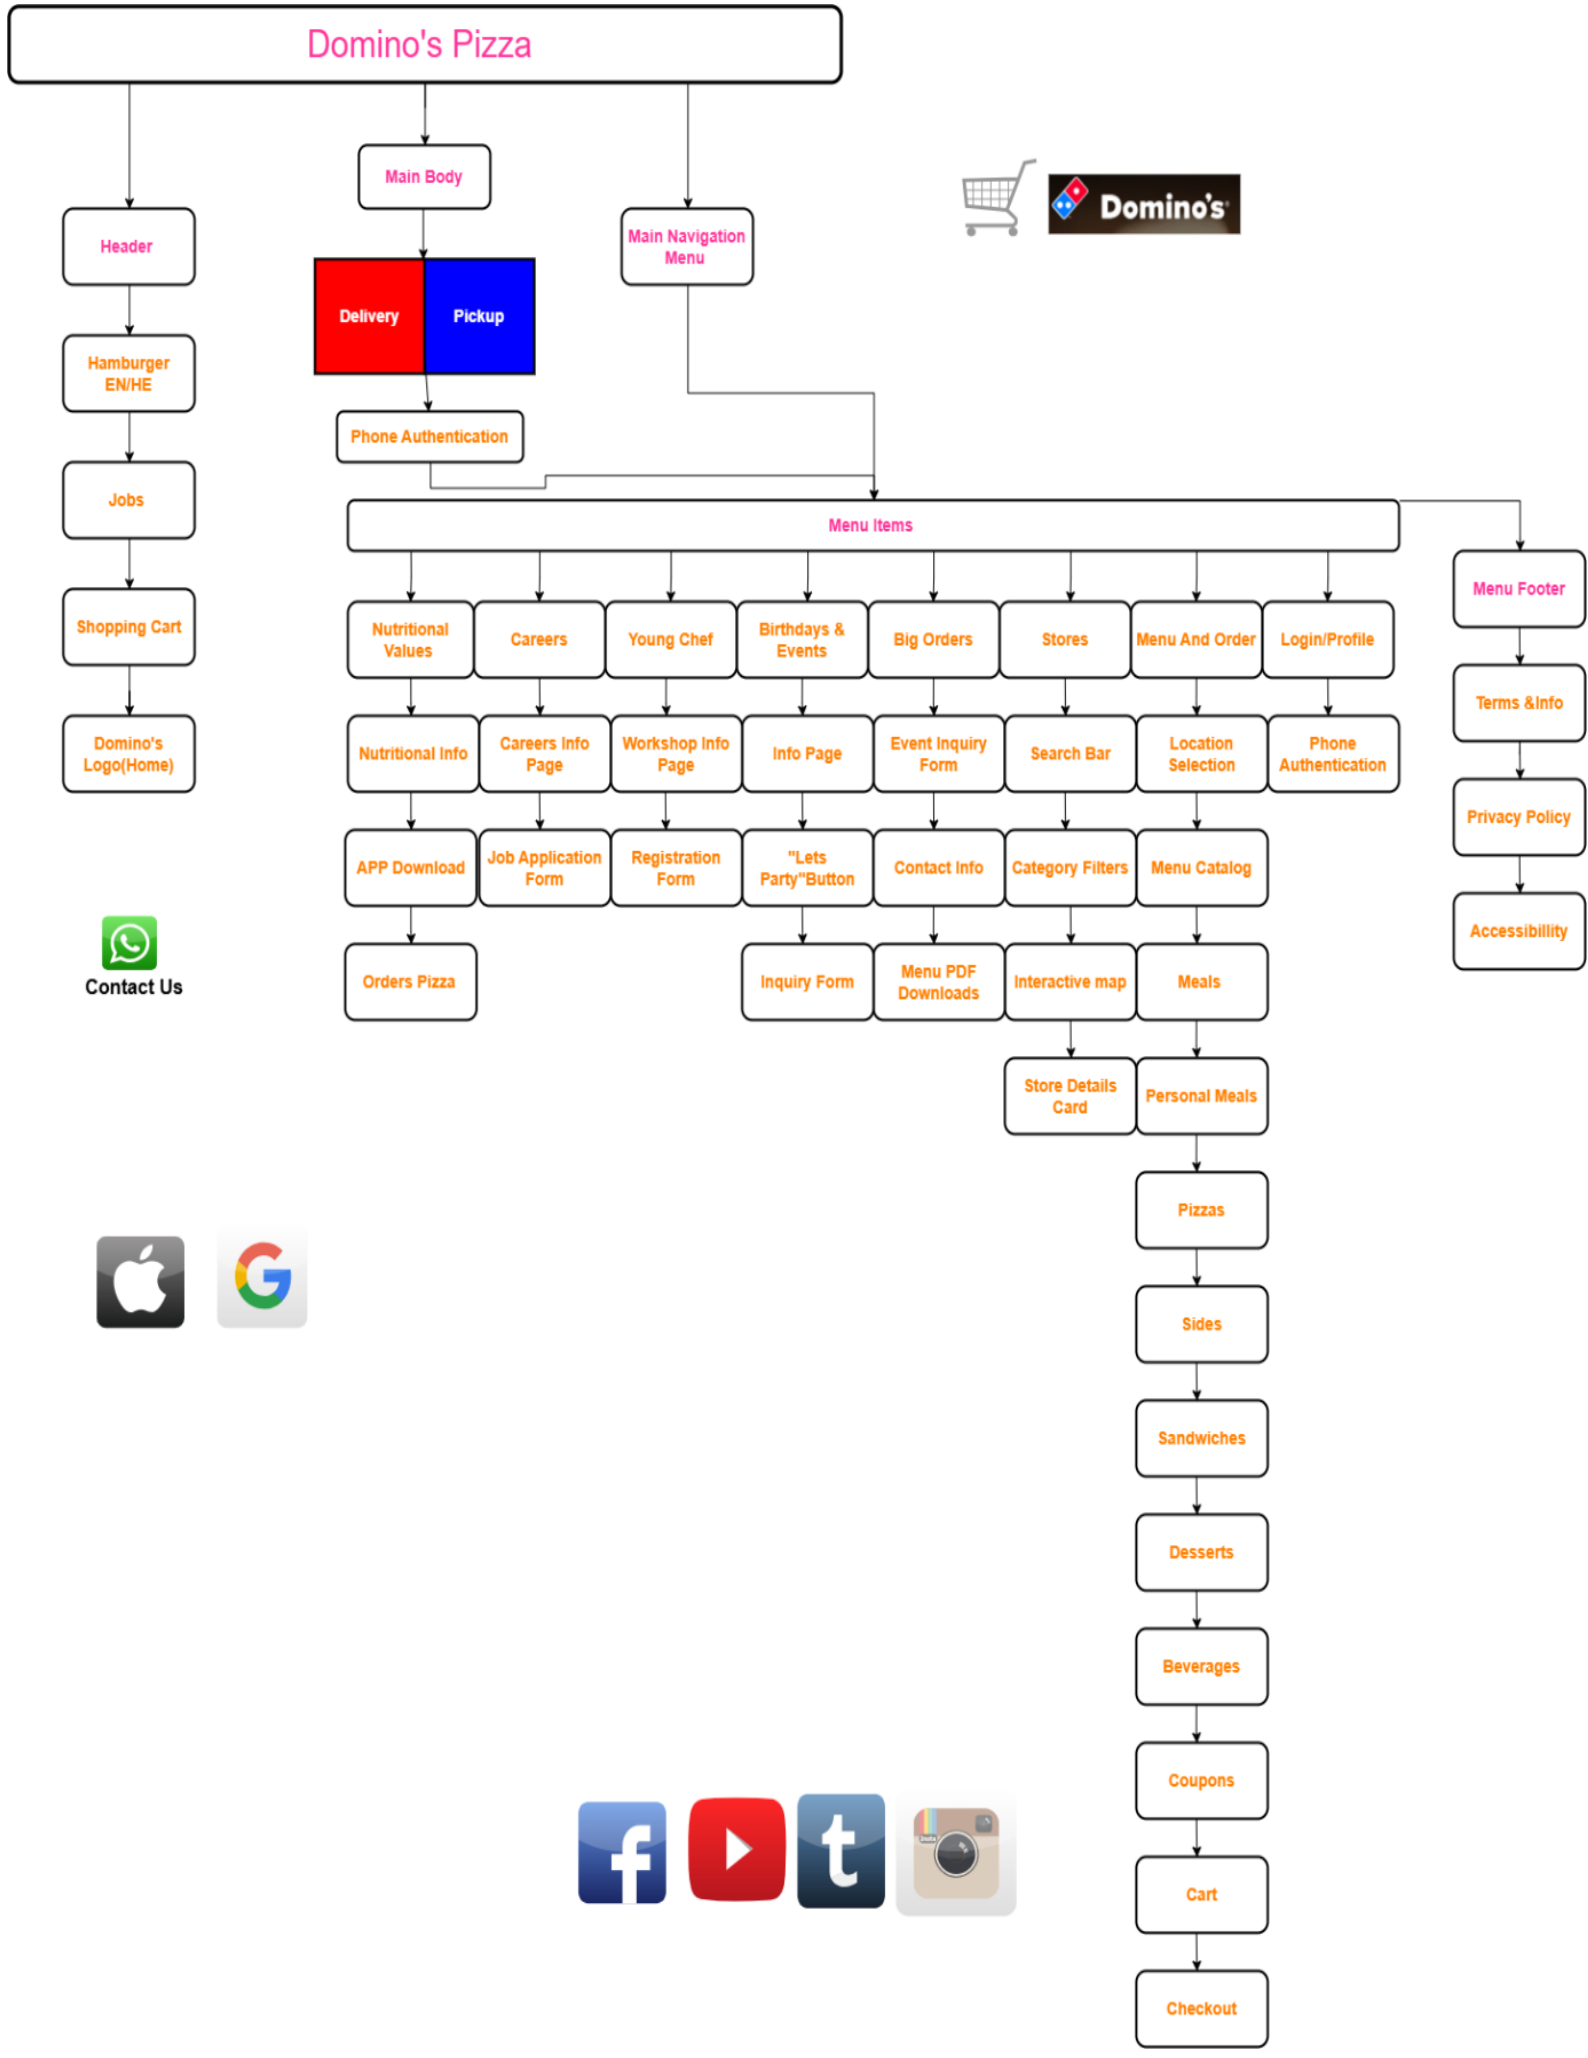

Purpose:

This report outlines the quality assurance lifecycle executed for the Domino's Pizza web platform. The evaluation focused on validating end-to-end user journeys, ensuring robust transaction handling, and verifying interface responsiveness across modules such as catalog navigation, custom pizza configuration, cart state persistence, checkout security, and user account management. The objective was to guarantee a seamless, stable, and error-free digital ordering experience under various operational scenarios.

Overview:

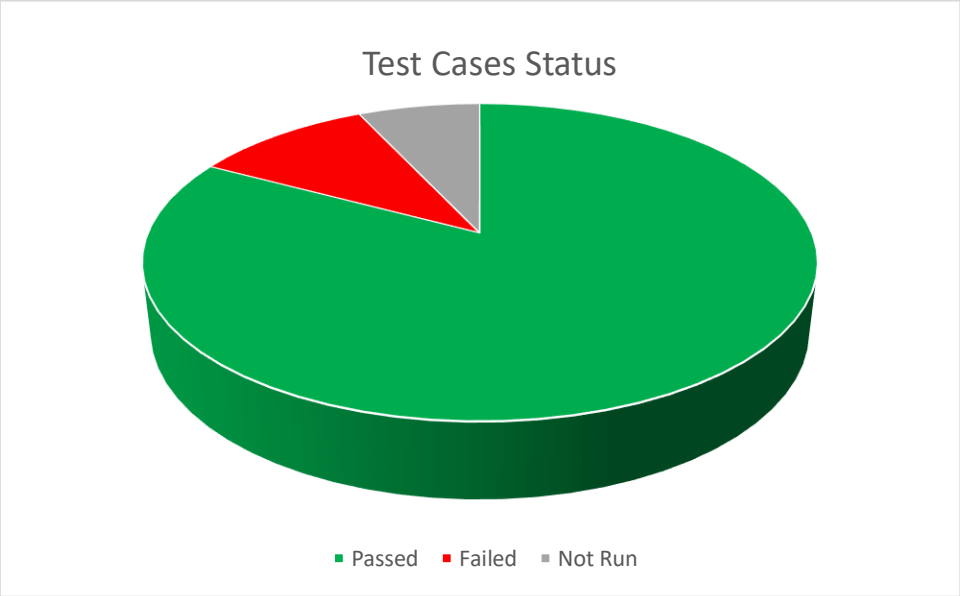

The Domino's Pizza platform operates as a digital ordering ecosystem accessible via web and mobile interfaces. Its core architecture is engineered to showcase the restaurant's culinary catalog while streamlining the user journey from menu browsing to finalizing transactions for delivery or store pickup.

Domino's

STR

This chart illustrates the overall status of the executed test cases for the Domino's web. Out of 215 total test cases, 178 successfully passed, 22 failed due to identified software defects, and 15 remained unexecuted (Not Run) due to time constraints or blocked features.

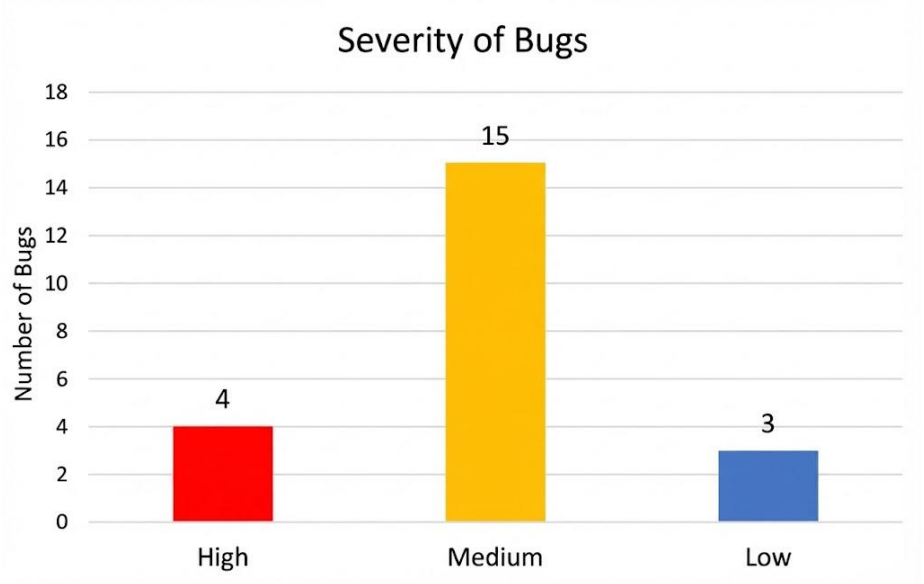

Passed	Failed	Not Run	Total
178	22	15	215

STR

This clustered column chart presents the distribution of bugs found during testing according to their severity level (High, Medium, and Low). Most bugs were classified as Medium severity (15 bugs), followed by High severity (4 bugs), while Low severity bugs were the least frequent (3 bugs)

STR

Key Recommendations & System Enhancements:

1. **Visual Styling & Interface Aesthetics:**

• Refine the site-wide visual layout and background themes to elevate the modern look and feel, ensuring they support content readability rather than causing visual clutter.

2. **Performance & Speed Tuning:**

• Streamline media assets and compress graphical components to accelerate rendering speeds across all views.

• Streamline background scripts and remove redundant elements to maintain low latency and high responsiveness.

3. **Multilingual Accessibility:**

• Expand localization support by providing a seamless language switcher (including English and additional regional languages), ensuring the platform accommodates a wider, international user base.

4. **User Experience Monitoring:**

• Establish channels for continuous user feedback collection regarding interface navigation and core features.

• Leverage these insights to iteratively optimize UI interactions, resolve usability friction points, and boost overall customer satisfaction.

STR

Conclusion:

Following my test run on the Domino's web, I found a few interface bugs ranging from low to high severity. While a lot of the site works fine, the high-severity issues specifically DP-3 and DP-8 which block scrolling in the menu are major roadblocks. Since users can't properly browse the menu, they basically can't complete an order, which is the whole point of the platform.

- **Final Recommendation:** **Do Not Deploy.**
  We need to hold off on deployment until DP-3 and DP-8 are fixed and retested.

Rank:	0|i000av:		

STR

Description

Steps To Reproduced:

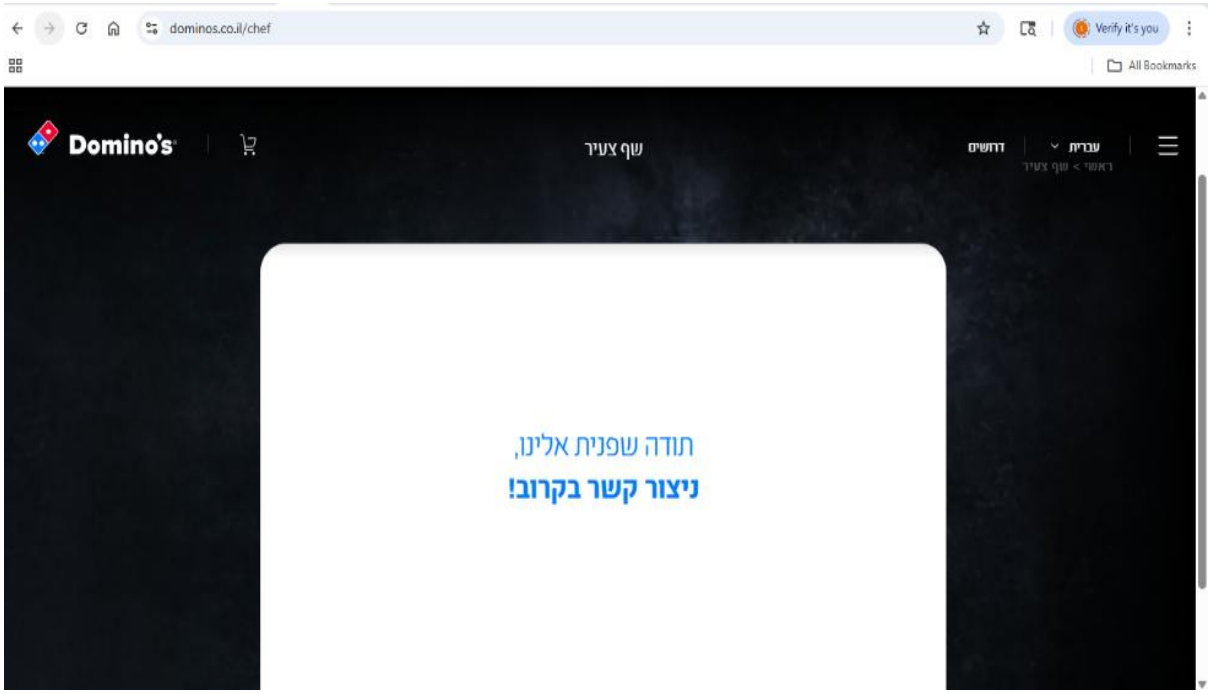

1. Go to the web:https://www.dominos.co.il/
2. Click the side menu
3. Choose **'Young chef'**
4. Enter your details
5. Click **'Give me a call'**

Actual Result:

Missing Option to Close "Contact Us" Window After Submitting Details to Young Chef

Expected Result:

A close option (X button) should be available after submitting the details

STR

[DP-2] The bottom box on the payment screen is cut off Created: 17/Feb/26 Updated: 17/Feb/26	
Status:	To Do
Project:	Dominos Pizza
Components:	None
Affects versions:	None
Fix versions:	None

Type:	Bug	**Priority:**	Medium

STR

Description

Steps To Reproduced :

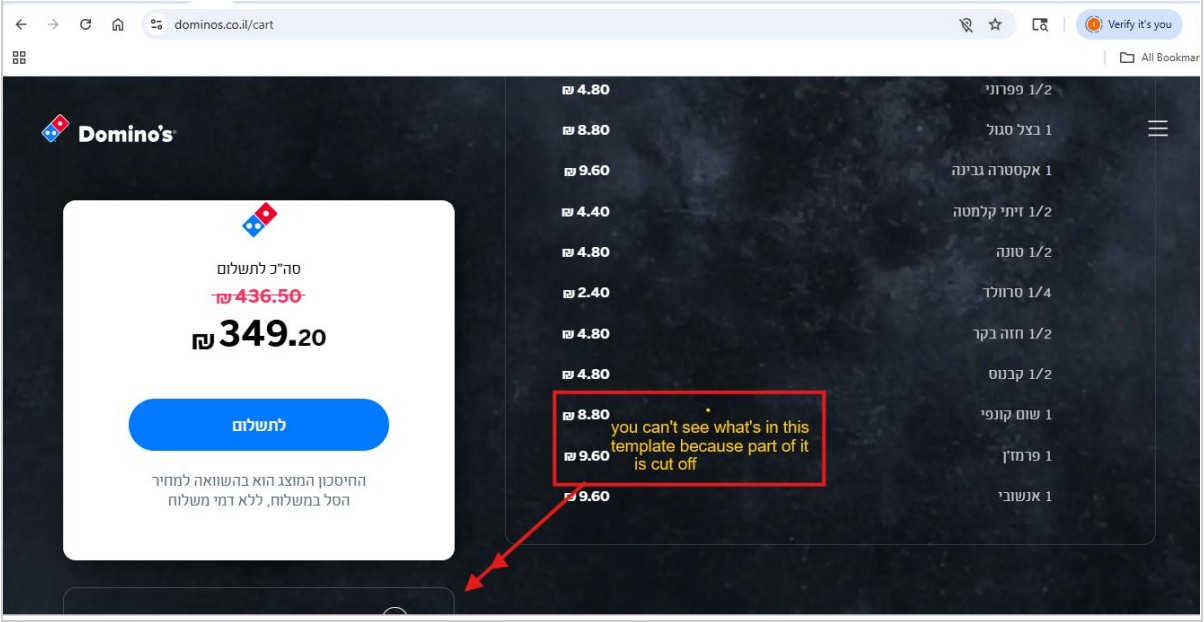

1. Go to the web : https://www.dominos.co.il/
2. Choose **‘Delivery’**
3. Click **‘I am just browsing’**
4. Click **‘all stores’**
5. Enter your current location
6. Choose item from the menu
7. Go to the cart

Actual Result:

The bottom box on the payment screen is cut off

Expected Result:

The entire screen should be fully visible without anything being cut off

STR
